RELEVANT EXPERIENCE

FACH-STAL | Data Analyst | Aug 2020 – Jun 2024 | Nysa, PL

Have worked at the manufacturing steel construction company as a data analyst supporting the engineering and management team.

- Cleaned and modelled data using python and SQL. Made unstructured and complex data easily readable and to work with for non-technical stakeholders.
- Looked for inconsistencies and ambiguities between the documentation and the data provided by the contractor.
- Served as business intelligence. Ensured that all stakeholders were equipped with the requisite information to perform their duties at every stage of the production process.
- Prepared periodic reports that summarized the company's performance, including income, expenses, and hours worked.
- Collected and stored company data in the — using docker via serverless Cloud Run — NocoDb Postgres database deployed in the Google Cloud Platform (GCP) SQL.
